

Food Service Equipment Product Case History

Food Service Equipment Manufacturer Turns to OX BOX for Package Strength and Protection

Problem:

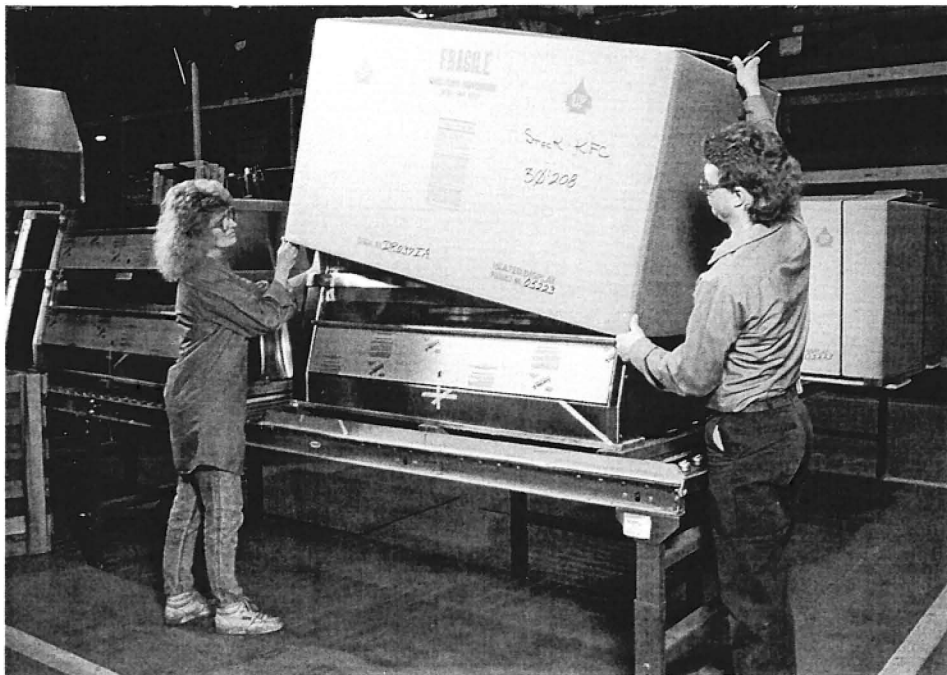

A major food service equipment manufacturer in the Midwest was looking for an efficient method of packaging humidified counter warmers. Weighing approximately 365 pounds, the warmers include fragile components and stainless steel cabinets, so protection was crucial. Also, the packages are constantly stacked and re-stacked during storage, making stacking strength very important.

Solution:

An OX BOX 1100 grade box with a custom wood pallet provides the protection and stacking strength required by the manufacturer. The OX BOX is strapped to the custom pallet with three straps. Ready-to-ship packages are stacked up to six high, minimizing floor space requirements in the storage area.

Benefits:

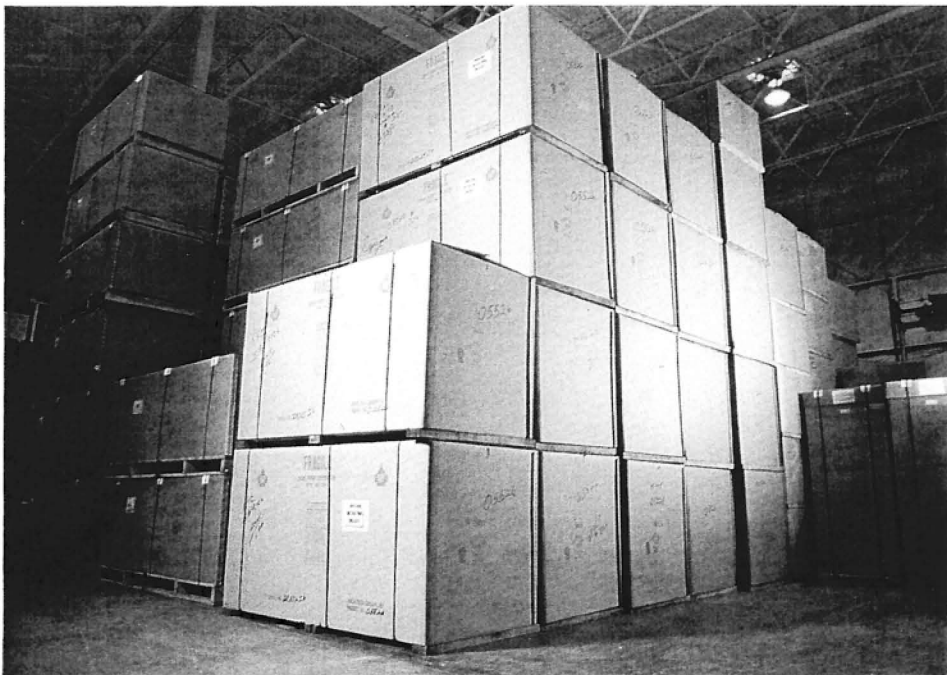

- Provides protection for expensive fragile components.
- OX BOX provides superior stacking strength.
- OX BOX stores flat, reducing storage and inventory problems.
- OX BOX is a recyclable resource.

OX BOX 1100 grade box provide cost efficient protection from storage and shipping damage.

Contact Us

OX BOX allows these packages, weighing 356 pounds and more, to be stacked up to six high.
